Experience

Full stack Developer at Military Service
2022 - 2023

As a Full-Stack Developer at Israeli Ground Forces Headquarters, I had the privilege to work on several mission-critical projects for the Israeli Ground Forces. These projects played a pivotal role in supporting both combatants on the ground and the ICT Corps. My responsibilities included designing, developing, and maintaining applications that facilitated real-time communication and information sharing. I leveraged a wide range of technologies, mainly MERN Stack (Mongo, Express, React, Node), to ensure the success of these projects. My work directly contributed to enhancing the efficiency and effectiveness of military operations.

Education

Matriculation certificate
2016 - 2020
